

CSCB07 – Software Design

Lab 4

Objectives

- Getting familiar with code conventions
- Applying SOLID design principles

Logistics

- This lab is worth 2% and it will be supervised by your TA during the tutorial sessions of Weeks 10 and 11 (Nov 6-17, 2023). If you encounter any problem while doing the steps listed in the following sections, ask the TA for help.
- Attendance will be taken during the tutorial. If you are unable to attend, please send your TA an email explaining why and make sure to submit the deliverables by the due date. Failing to do so might result in a 10% penalty.
- The lab should be done individually.
- The due date is Nov 19, 2023.

Instructions

1. A coding convention is a commonly used guideline that promotes a specific coding style with respect to naming, indentation, comments, etc. You are required to explore [this list](#) of coding conventions for the Java programming language and identify up to 5 violations in the code you submitted for Lab3 (your TA will provide you with some code to analyze if you hadn't submitted one). The violations should be listed in a text document to be submitted with the other deliverables of this assignment.
2. The code provided in *Lab4Part2.zip* violates one or more SOLID principles. You are required to refactor it so that it conforms to all five principles.

Submission

Upload the text document of part 1 and the refactored code of part 2 as a single archive file to “Lab 4” on Quercus.

Evaluation

- Part 1: 0.5 pts
- Part 2: 1.5 pts
- A 10% penalty will be applied for missing the tutorial with no valid excuse.
