

Q1

Relationship:

- customer – own – automobile:
 - One – to – Many
- workshop – perform – maintenance work
 - One – to - Many
- maintenance work – replace – spare parts
 - One – to – Many

Schema:

- Workshop ('wname', 'address', 'phone number')
- Maintenance work ('number', 'start', 'end', 'labor hours')
- Spare parts ('code', 'quantities', 'name', 'unit cost')
- Automobile ('registration', 'make/model', 'owner')
- Customer ('SIN', 'surname', 'first name', 'phone')
- Perform ('wname', 'number')
- Replace ('number', 'code')
- Own ('SIN', 'registration')

Q2

Relationship:

1. Patient – has – Admission information:
 1. One – to – Many
2. Doctor – charge - Admission information :
 1. One – to - Many
3. Doctor – attend – University:
 1. One – to – Many
4. Doctor – present – exam:
 1. One – to – Many
5. Patient – go – exam:
 1. One – to – Many
6. Exam – need – Component:
 1. One – to – Many
7. Component – prescribe – Medicine:
 1. Many – to - Many
8. Exam – diagonalize – illness:
 1. One – to - Many

Schema:

1. Patient ('SIN', 'first', 'last', 'birth')
2. Exam ('id', 'date', 'time')
3. Component ('SIN', 'id', 'dosage')
4. Medicine ('m_id', 'cost', 'm_name')
5. Admission information ('a_id', 'contact number', 'a_date', 'd_date', 'd_reason')
6. Doctor ('reg_number', 'special', 'last_d', 'first_d')
7. University ('name', 'at_date', 'g_date')
8. Illness ('code', 'i_name', 'description')
9. Has ('SIN', 'a_id')
10. Go ('SIN', 'id')
11. Need ('SIN', 'id', 'dosage')
12. Prescribe ('id', 'dosage', 'm_id')
13. Diagonalize ('id', 'code')
14. Present ('reg_num', 'id')
15. Charge ('reg_num', 'a_id')
16. Attend ('reg_num', 'name')

Relationship:

1. Course – has – Course offering:
 1. One – to – Many
2. Course – pre - Course:
 1. Many – to - Many
3. Course offering – teaches - instructor:
 1. Many – to – Many
4. Course offering – enrolls – student:
 1. One – to – Many
5. student – get – grades:
 1. One – to – Many

Schema:

1. Course ('course_num', 'title', 'syllabus', 'credits')
2. Pre ('course_num1', 'course_num2')
3. Has ('course_num', 'of_id')
4. Course offering ('of_id', 'year', 'classroom', 'course_num', 'sec_num', 'semester', 'timing')
5. Teaches ('of_id', 'id')
6. Instructor ('id', 'department', 'i_title', 'name')
7. Enrolls ('of_id', 'stud_id')
8. student ('stud_id', 'st_name', 'program')
9. Get ('stud_id', 'of_id', 'grade')
10. Grades ('of_id', 'grade')

1):

 $A \rightarrow B \Rightarrow A \rightarrow AB$ (Augmentation)
 $A \rightarrow C \Rightarrow AB \rightarrow BC$ (Augmentation)
 $A \rightarrow BC$ (Transitivity)

2):

$BC \rightarrow B$ (Reflexivity)
 $BC \rightarrow C$ (Reflexivity)
 $A \rightarrow BC$ (Given)

 $A \rightarrow B$ (Transitivity)
 $A \rightarrow C$ (Transitivity)

3):

$A \rightarrow B \Rightarrow AC \rightarrow BC$ (Augmentation)
 $BC \rightarrow D$ (Given)
 $AC \rightarrow D$ (Transitivity)

4):

1. $A \rightarrow B$ (Given) $\Rightarrow A \rightarrow AB$ (Augmentation)
2. $AB \rightarrow CD$ (Given) & $A \rightarrow AB$
3. $A \rightarrow CD$ (Transitivity)
4. $A \rightarrow B$ (Given) & $B \rightarrow DE$ (Given)
5. $A \rightarrow DE$ (Transitivity)
6. $C \rightarrow F$ (Given) $\Rightarrow CD \rightarrow DF$ (Augmentation)
7. $E \rightarrow G$ (Given) $\Rightarrow DE \rightarrow DG$ (Augmentation)
8. $A \rightarrow DF$ (Transitivity) & $A \rightarrow DG$ (Transitivity)
9. $DF \rightarrow F$ & $DG \rightarrow G$ (Reflexivity)
10. $A \rightarrow F$ & $A \rightarrow G$ (Transitivity)
11. $A \rightarrow AF$ & $AF \rightarrow FG$ (Augmentation)
12. $A \rightarrow FG$ (Transitivity)

1)

1. $A \rightarrow B \ \& \ B \rightarrow C \Rightarrow A \rightarrow C$ (Transitivity)
2. $A \rightarrow B \ \& \ B \rightarrow D \Rightarrow A \rightarrow D$ (Transitivity)
3. **Nontrivial FD's:** $A \rightarrow B$, $B \rightarrow C$, $B \rightarrow D$
4. A can determined all Attributes $\Rightarrow$ **key is A**
5. **Super key:** AB, AC, AD, ABC, ABD, ACD, ABCD

2)

1. $AB \rightarrow C \Rightarrow AB \rightarrow BC$ (Augmentation) & $BC \rightarrow D \Rightarrow AB \rightarrow D$ (Transitivity)
2. $BC \rightarrow D \Rightarrow BC \rightarrow CD$ (Augmentation) & $CD \rightarrow A \Rightarrow BC \rightarrow A$ (Transitivity)
3. $CD \rightarrow A \Rightarrow CD \rightarrow AD$ (Augmentation) & $AD \rightarrow B \Rightarrow CD \rightarrow B$ (Transitivity)
4. $AD \rightarrow B \Rightarrow AD \rightarrow AB$ (Augmentation) & $AB \rightarrow C \Rightarrow AD \rightarrow C$ (Transitivity)
5. **Nontrivial FD's:** $AB \rightarrow C$, $BC \rightarrow D$, $CD \rightarrow A$, $AD \rightarrow B$
6. From the above we get key: **AB, BC, CD, AD**
7. **Super Key:** ABC, ABD, BCD, ACD, ABCD

1)

1. $A \rightarrow BC \Rightarrow A \rightarrow B \ \& \ A \rightarrow C$ (Decomposition)
2. $A \rightarrow B \ \& \ B \rightarrow D \Rightarrow A \rightarrow D$ (Transitivity)
3. $B \rightarrow D \Rightarrow BC \rightarrow CD$ (Augmentation) & $CD \rightarrow E \Rightarrow BC \rightarrow E \ \& \ A \rightarrow BC \Rightarrow A \rightarrow E$ (Transitivity)
4. $A^+ = ABCDE \Rightarrow A$ is a key
5. For $E \rightarrow A \Rightarrow$ according to transitivity, E is also a key; For $BC \rightarrow E \Rightarrow$ according to transitivity, BC is also a key
6. **Keys** : E & A & BC & CD
7. **Reason:** There is no candidate key with three attributes b/c E or A or BC or CD enough to determinate all attributes. If adding any attribute, it is not the minimal length.

2)

1. $B \rightarrow D$: B is not the super key. $\Rightarrow$ **not BCNF**

3)

1. $B \rightarrow D$: B is not the super key and D is a prime attribute. $\Rightarrow$ **3NF**

4)

1. $\text{Attr}(R1) \cup \text{Attr}(R2) = \text{Attr}(R)$
2. $\text{Attr}(R1) \cap \text{Attr}(R2) = A$ which is a key of R1 => **lossless**
3. R1: $A \rightarrow BC$ & R2: $E \rightarrow A, A \rightarrow E, A \rightarrow D$
4. Can't preserve $B \rightarrow D$ => **not preserve**

5. $\text{Attr}(R3) \cup \text{Attr}(R4) = \text{Attr}(R)$
6. $\text{Attr}(R3) \cap \text{Attr}(R4) = CD$ which is a key for R4 => **lossless**
7. R3: $A \rightarrow BC, A \rightarrow D, B \rightarrow D, BC \rightarrow A, CD \rightarrow A$ & R4: $CD \rightarrow E, E \rightarrow C, E \rightarrow D$
8. Can preserve $E \rightarrow A, A \rightarrow BC, CD \rightarrow E, B \rightarrow D$ => **preserve**

5)

R1: $A \rightarrow BC, BC \rightarrow A$: BC and A are a super key => **Both**

R2: $E \rightarrow A, A \rightarrow D, A \rightarrow E$ both A & E are candidate keys and D is a prime attribute => **both**

R3: $A \rightarrow BC, A \rightarrow D, B \rightarrow D, BC \rightarrow A, CD \rightarrow A$: B is not a super key and D, BC, A is a prime attribute => **3NF**

R4: $CD \rightarrow E, E \rightarrow C, E \rightarrow D$: both CD and E are super key => **Both**

6)

1. For $B \rightarrow D$, violate BCNF

2. $B \rightarrow D$: $R = \{ABCE, BD\}$

3. $R_1(ABCE)$, $R_2(BD)$

4. **preserve**

1)

1. IS

2)

1. $I \rightarrow B$: $R = \{ISQD, IBO\}$

2. $S \rightarrow D$: $R = \{ISQ, IBO, SD\}$

3. $R_1(ISQ)$, $R_2(IBM)$, $R_3(SD)$

4. Change to one attribute RHS $\{I \rightarrow B, IS \rightarrow Q, B \rightarrow O, S \rightarrow D\}$

5. Eliminate unnecessary attributes from LHS $\{I \rightarrow B, IS \rightarrow Q, B \rightarrow O, S \rightarrow D\}$

6. After operation the answer is $\{I \rightarrow B, IS \rightarrow Q, B \rightarrow O, S \rightarrow D\}$

7. I is not the super key $\Rightarrow$ **not BCNF**

- 1)
1. $\pi_{\text{name}}(\sigma_{\text{sno}=5}(\text{students}))$
2. $\pi_{\text{address}}(\sigma_{\text{name}='jones'}(\text{students}) \bowtie \text{study} \bowtie \text{universities})$
3. $\pi_{\text{uname}}(\text{study} \bowtie \text{participate})$
4. $\pi_{\text{uname}}(\text{universities}) - \pi_{\text{uname}}(\text{study} \bowtie \text{participate})$
5. $\pi_{\text{eno}}(\text{took} - \text{place} \bowtie \text{participate} \bowtie \text{study})$

1)

1. $S := \sigma_{\text{floor}=2}(\text{dept})$
 $\pi_{\text{iname}}(\text{item}) - \pi_{\text{iname}}(\text{sales} \bowtie_{\text{sales.dept}=\text{s.dname}} S)$

2. $M := \sigma_{\text{eno}=\text{mgr}}(\text{employee})$ $E := \sigma_{\text{eno} \neq \text{mgr}}(\text{employee})$. $S := \pi_{\text{dept}}(M \bowtie_{(M.\text{dept} = E.\text{dept}) \wedge (E.\text{salary} \geq M.\text{salary})} E)$
 $\pi_{\text{dept}}(\text{employee}) - S$

3. $D := \sigma_{\text{floor}=2}(\text{dept})$ $S1 := D \bowtie_{D.\text{dname}=\text{sales.dept}}(\text{sales})$
 $\pi_{\text{item}}(\sigma_{\text{count}(\text{dept}) \geq 2} \gamma_{\text{item}, \text{count}(\text{dept})}(S1))$

4. $S1 := \pi_{\text{dept}, \text{item}}(\text{supply})$ $S2 := \pi_{\text{dept}, \text{item}}(\text{sales})$ $S3 = S1 - S2$
 $\pi_{\text{item}}(S3 \bowtie_{S3.\text{dept}=S1.\text{dept}} S1)$

Q10

1)

1. $S := \pi_{\text{committee}}(\sigma_{\text{country}='York'}(\text{Representative}))$ $D := \pi_{\text{president}}(S \bowtie \text{Committies})$
 $\pi_{\text{firstname, surname}}(D \bowtie_{D.\text{president}=\text{Representative.number}} \text{Representative})$

2. $S := \sigma_{\text{name}='Finance'}(\text{Committies})$
 $\pi_{\text{firstname, surname}}(S \bowtie_{S.\text{number}=\text{Representative.committee}} \text{Representative})$

3. $S := \sigma_{\text{name}='Finance'}(\text{Committies})$. $D := S \bowtie_{S.\text{number}=\text{Representative.committee}} \text{Representative}$ $K := D \bowtie_{D.\text{county}=\text{Counties.code}} \text{Counties}$
 $\pi_{\text{firstname, surname, county, region}}(K)$

4. $S := \text{Representative} \bowtie_{\text{Representative.country} = \text{Counties.code}} \text{Counties}$
 $S1 := S$
 $\pi_{\text{region}}(\sigma_{S.\text{surname}=S1.\text{surname}} \wedge S.\text{number} \neq S1.\text{number})(S \times S1)$
